

AGORA^{SA}

Successful
with the
five(9)s Console

One of Poland's largest media company uses the five(9)s Console for their IT-administration

Agora is one of the largest and well known media companies in Poland. Its biggest undertakings are: Helios S.A. — Poland's largest cinema network operator, ranked in terms of number of facilities, and the owner of the NEXT FILM distribution and production company, Gazeta Wyborcza — Poland's most popular opinion-forming newspaper, available in paper and electronic form — at Wyborcza.pl and Wysokieobcasy.pl, and via the application for smartphones, tablets and e-readers, and AMS — Poland's leading outdoor advertising company. Agora Group owns three brands of local music radio stations: Radio Żółte Przeboje, Radio Pogoda, Rock Radio, and the Tuba.FM web radio, in addition to being a majority shareholder in the Radio TOK FM cross-regional radio station. Agora's web portals are leaders in terms of popularity in their respective categories. Among the Company's several dozen web-based brands are, i.e. Gazeta.pl, Sport.pl and Tokfm.pl, available online and via mobile applications. The Company is also the publisher of magazines and engages in publishing and distribution of books, music and film publications.

The five(9)s Console meets Agoras expectations both on administrative and helpdesk level.

Agora's IT team started using five(9)s Console in September 2018. The product meets our expectations both on administrative and helpdesk level.

“At the moment approximately 40 team members use the console, mostly to deploy applications or Windows operating systems and for remote works. For our team the most significant advantage of five(9)s Console is transparency of the interface and time savings with no unnecessary clicks, as well as the way in which the distribution of operating systems is performed. Elements that particularly deserve to be praised include:

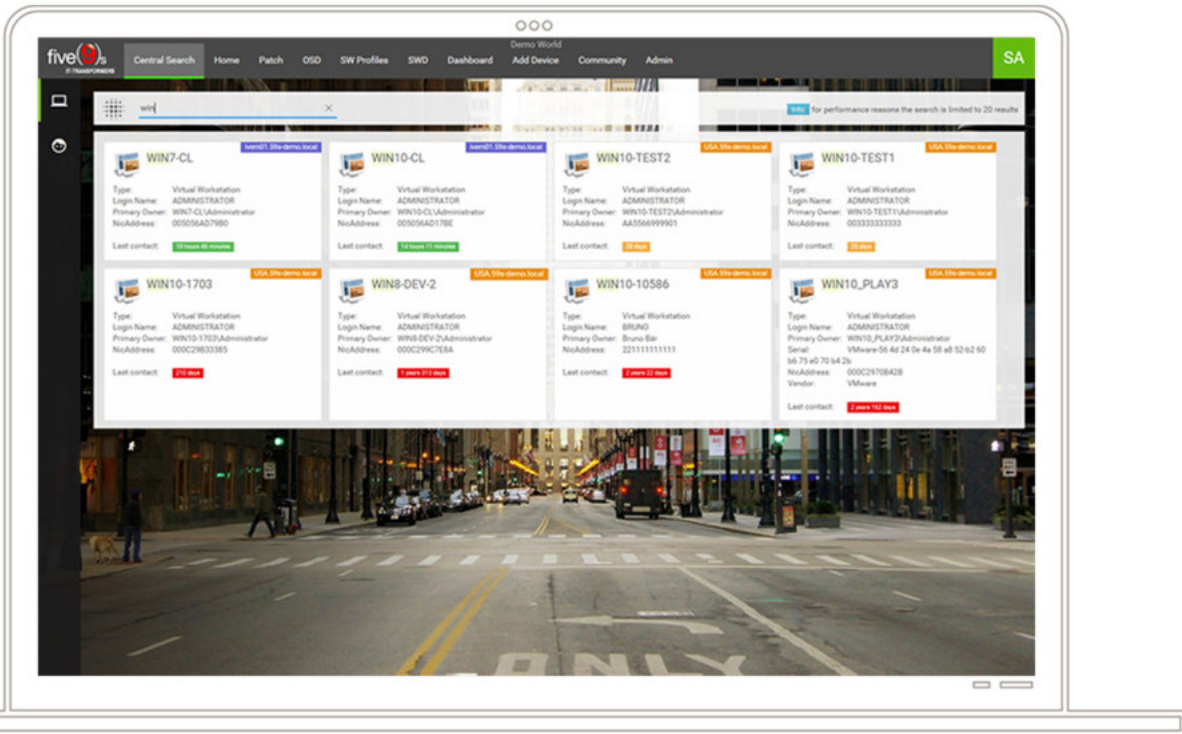

- intuitive arrangement of the list of computers and buttons;
- custom button – irreplaceable for administrators! It allows us to create new custom commands available for consoles' users;
- distribution of the operating system to the workstations along with the attached assigned software that greatly improves our work;
- Live View - a great solution enabling us to get an online view of operations on the workstation;
- thanks to the CentralSearch module we can easily search for workstations or users and computers assigned to them.”

“five(9)s Console is a fully relevant solution for Agora. We wish its creators further development of the product and success.”

Witold Włuka, Head of the IT Monitoring and User Support Department, Agora S.A. Group
